How do I get the work plan analysis to use a new policy sequence or prioritization scheme?

Paul Paisley - 2020-09-02 - [Comments \(0\)](#) - [Frequently Asked Questions](#)

Question:

I've added a new policy sequence or prioritization scheme to the work configuration. How do I get the work plan analysis to use a new policy sequence or prioritization scheme?

Answer:

From the Inventory view in BUILDER, you can navigate to and click on a particular Site, which displays the General Info for that site. In the Reference Settings, you will see the Cost book, Inflation book, Service Life book, Policy Sequence, and Prioritization Scheme for this site. These Reference Settings are used by the Work plan generator to generate and prioritize work. To change the settings that are used, select a different prioritization scheme or policy sequence in Reference Settings and click save.

The screenshot shows the BUILDER software interface. On the left is the 'Inventory' tree view with a search bar. The main panel displays the 'Reference Settings' for a selected site, which is highlighted with a red box. The settings include dropdown menus for Cost Book, Inflation Book, Service Life Book, Policy Sequence, Prioritization Scheme, CII Set, FCI Goal, and Cost Modifier Library. The 'Policy Sequence' and 'Prioritization Scheme' dropdowns are currently set to 'Select a policy sequence' and 'Select a prioritization scheme' respectively. The 'Reference Settings' section is located under the 'General Info' tab, which also shows 'Location Factors' and 'Calculated Data'.

Metric	Value
CI	65
FI	100
PI	75
FCI	100

Please note only certain roles are allowed to make these Reference Setting changes. Please see the [BUILDER Roles](#) for more information on BUILDER roles.
