2024 Sustainment Management System (SMS) Summit

2024-06-04 - Paul Paisley - [Comments \(0\)](#) - [General](#)

The SMS Summit is returning this summer to the National Academy of Sciences Building in Washington, D.C. on July 31 – August 2.

The 2024 SMS Summit is an event providing updates on SMS software development efforts, application usage and implementation across federal facilities, and on-going and upcoming research in SMS work.

Sessions consist of updates with demonstrations detailing Enterprise SMS (ESMS) software development and engineering development for various infrastructure domains. In addition, there will be panel discussions with breakout presentations for federal facilities personnel and industry practitioners to share best practices for SMS implementation and integration in facility asset management.

The agenda for this year's SMS Summit is live and can be viewed at the link below:
