E-SMS Sandbox 1.10.643 1.10.644 Release Notes

2026-07-07 - Brandon Athey - Comments (0) - E-SMS Release Notes

Release Date: 07/07/2026

E-SMS Version 1.10.643

Bug Fixes

Assess

- Workspace descriptions are now limited to 256 characters.
- Duplicate “Answer” columns have been removed from the Distress and Defect category sections for component and asset assessments.
- The “View Images” icon now appears in View Mode for defect assessment answers with images.
- Assets can now be added successfully to all Workspaces after their creation.
- Workspace search tabs are now consistently named throughout the Web App.
- The “Download Workspace” button now works as expected.
- The “Year” column now displays the “Year Installed” instead of the “Year Repaired” at the Inventory > Assets > Components page.
- Groups can now be successfully created.
- When an asset is added to an Asset Group, the group immediately appears in the asset’s list of groups to which it belongs.

Work

- Editing a work profile no longer generates an error.
- In Work > Work Analysis > Profile, all mandatory fields are now denoted with asterisks, including in the “Scopes” sub-field.
- Users must now specify a number of years in the “Years to Run” field to run Work Analysis profiles.
- Priority measure rules can now be edited after the initial save.
- The Work Analysis “Work” tab no longer displays “Compare null to Work Items” when there are no work items.
- The “Work” tab in Work Analysis now includes column options for “UNIFORMAT,” “CMC,” and

“Managed Object ID.”

- Spelling errors on the “Limited Funding” > “Select Funds” popup at the Work Analysis > Profile tab have been corrected.

Feature Updates & Improvements

Assess

- Deleting workspaces that contain changes now require approval from all specified approvers.
- Workspace creators and approvers can now access user sync data before merging or deleting Workspaces.
- Approvers and supervisors can now see whether a Workspace still contains unmerged data.
- Administrators and Support users can now identify which Workspace users are actively syncing as well as troubleshoot sync questions without viewing logs.
- Users who delete or merge Workspaces can now view upsync metadata for items such as object counts and object types.

Inventory

- The “Restore Default View” tooltip is now called “Revert to Application Defaults” to avoid overlap with the “Save as my Default View” tooltip on accordion tables.
- All Component Detail and Asset Detail page references to “inspections” have been changed to “assessments.”

Work

- Assigned user permissions now determine which scopes can be selected at Work Analysis > Profile for sustained organizations.
- A confirmation message now appears when users start to run a profile. Additionally, no profile runs for other profiles can be performed while one profile is running.
- The work analysis process now supports sustainment relationships. If a profile scope contains assets that are sustained by different organizations, work is generated only for the assets sustained by the organizations in the selected scope.

E-SMS Version 1.10.644

Bug Fixes

Assess

- Empty assessment categories can now only be labeled as “Not Applicable” instead of “Defect Free.”
- The “Density” value on Defect Assessments is now expressed as a percentage instead of a fraction.
- Users from sustaining organizations can now select sites when creating a Workspace or adding assets.

Feature Updates & Improvements

Documents

- Documents are now automatically associated with the owning site.

Settings

- A free-text “Business” field has been added to User Profile settings.

E-SMS Version 1.10.643

Field App

Bug Fixes

Assess

- The Asset Direct Rating assessment template is no longer visible when creating a component assessment in the Field App.
- Photos can now be viewed or added to Work Items in the Field App.
- Field App no longer crashes when adding an asset.
- Creating work items, asset assessments, and child components no longer cause sync failures in the Field App.
- Erroneous validation errors no longer occur when users create new component or asset Distress Rating assessments in the Field App.

Home

- The “Sync” badge now disappears after a successful sync in the Field App.
- The Field App has been updated to include the following:
    - Flag icons by the “Name” and “Capacity” columns on component tables, and next to the “Name” column on asset tables.
- The Reset button now loads the “Reset Everything” prompt instead of the “Reset Settings” dialog. This prompt confirms the user’s intent to delete all Field App data.

Inventory

- Installation Years now display as expected, listing only the year of installation instead of a full date.
- After creating a child component, the Field App now navigates to the child component’s detail page.
- Upsyncing new or edited child components no longer results in “Status Code: 400” sync failures in the Field App.
- The Field App now supports images for Component Details.

- UNIFORMAT codes are now a part of component descriptions on Field App Component Detail pages.
- Field App Component Search tables now offer resizable columns and the option to be reordered.
- Information on the top banner of Detail pages now appears together on one line in the Field App.
- Upsyncing component section details from the Field App no longer results in a “500 error.”
- Columns no longer overlap on the initial display of Asset Search Pages in the Field App.
- “Copy as New” now properly saves the copied Section Details.

Feature Updates & Improvements

Assess

- Assessment names are now prepopulated with the component name. The field remains user-editable.

E-SMS Version 1.10.644

Field App

Bug Fixes

Assess

- A “Rotate” button has been added to the “Photos” sections for assets and components.
- Assessment photos are now successfully syncing to the Field App.
- Section detail dates synced from the Field App now appear correctly in the Web App.
- Images added to assessments in the Web App now appear in the Field App after syncing.
- The specification dropdown now populates correctly when adding a component in the Field App.

Inventory

- Field App no longer crashes when searching for assets.

Feature Updates & Improvements

Assess

- Workspace sync better supports large Workspaces with over 200 assets.
