Certificate of Networkiness (CoN)- RAILER 6.x

Paul Paisley - 2019-04-04 - [Comments \(0\)](#) - [RAILER](#)

Certificate # 201418294

approved 10/28/2014, expires 10/28/2017

Description:

Railer Sustainment Management System 6.x is a knowledge-based track management program that gives planners decision support in the sustainment, restoration, and modernization of their track (rail) network. Railer combines condition assessment, work plan generation, and spatial analysis to provide support for managers to make informed decisions. Railer is an installation-level PC application for collection of railroad inventory, conditions, and work requirements to repair deficiencies. The information collected is focused on asset management. Railer provides facility management personnel with the ability to create, edit, and delete records using a local database file. These records are used to manage repairs on the rail system.

This application does not traverse the network. The application is installed on the desktop computer. The users access and enter data to the program at their workstation. The product does not pull data or transmit data to any other devices, systems, or servers. The data is saved to a MS Access .mdb file format. The data stays internal to the local enclave.

POC: netcom.hq.networkiness@mail.mil /(520)538-1199

This Certificate of Networkiness is based on a trusted standardized platform, configured per FDCC. All patches and updates will be provided by the host network administrator (NEC or DECC) in accordance with all technical directives, mandates, and IAVM. This Certificate of Networkiness is no longer valid should the assessed configuration be significantly altered. Per Army Cyber Command guidance, all operating environment will implement HBSS capabilities. Upon expiration of this Certificate of Networkiness, this application must be reassessed to ensure it is still compliant with the GNEC architecture and is still networky. Should this software version be upgraded prior to this expiration, the new version must be evaluated for networkiness.
